

DESIGN FREELY IN METAL

GIVE EACH SURFACE

A UNIQUE CHARACTER

VeroMetal[®]

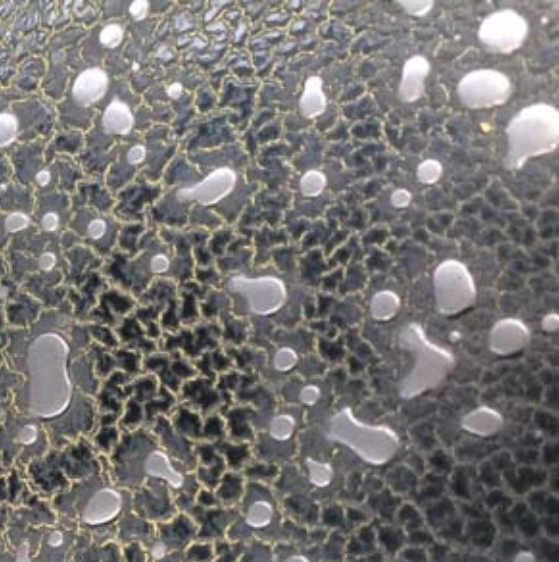

Miles ahead, you notice

VeroMetal® cold-workable liquid metal

VeroMetal® is a cold-workable liquid metal that can be applied to create a metal veneer on practically any surface by spraying, rolling, pouring or by applying with a palette knife or trowel. After application, VeroMetal® possesses all the optical and physical properties of metal.

A final finish is achieved by sanding, polishing, patinating or oxidizing the surface. Each object can be customized to create a unique look with the characteristic appearance of metal. VeroMetal® can be applied indoors, out-doors and in damp environments. It adheres well to practically all surfaces and does not crack or peel away.

Extensive range

Twelve varieties of VeroMetal® are available:

Aged Bronze

Copper

Manganese

Aluminum

Gold

Nickle Silver

Brass

Gunsmoke

White

Bronze

Iron

Zinc

Proven quality

Design freedom is not the only reason leading architects and designers use VeroMetal®; long-standing experience and proven quality are further convincing arguments. Our high-profile, special projects are the best proof of our capabilities. For example, VeroMetal® has been used in the Louvre Abu Dhabi, super yachts, exclusive retail chains, on fine furniture, on works of art and to create extraordinary façades.

Environmentally friendly and sustainable

Engineer a design with 90% less metal. Replace solid metal parts with a more environmentally friendly solution. For example, choose a lightweight substrate and coat it with a VeroMetal® metal finish that is only 5 - 7 mils thick. Your project will have the characteristics and appearance of real metal, but significantly fewer metal resources will be consumed. In addition, using lighter weight construction materials saves energy as less weight is moved. Additionally, our Aquafill® waterborne binder is odor-free which makes indoor application easier to manage.

Unlimited formability and unique design

This coating, made from real metal, gives architects, interior designers, stylists and artists the flexibility they require to pioneer new designs, and each design has the authentic characteristics of metal.

Luxurious and durable

VeroMetal® has been tested under extreme conditions around the world and has a proven track record of longevity in multiple environments; outdoor, indoor and in wet areas. With a strong, durable, lightweight metal coating, it provides exclusive finishing designs to yachts, hotels, shop interiors and more.

Architecture with flair

Finish façades, walls, floors, furniture or construction elements. Create surfaces that are authentically rustic, polished to a mirror finish, or have a striking texture.

Value engineering opportunities

Delight discerning clients with innovative ideas *and* save money. VeroMetal® can be substituted for more expensive metal materials such as sheet metal or foundry. Transform environmentally sustainable MDF, recycled aluminum or drywall by applying the infinitely flexible VeroMetal® to produce gorgeous metal surfaces. With VeroMetal®, it is now possible to specify metal on surfaces (where previously) metal finishes were not possible.
